

Accessing SHOT questionnaire datasets from the SHOT Database reporting portal

Once you have submitted your SAE/SAR you can immediately enter the SHOT Database (Dendrite) and extract the question set relating to your reporting category. The questions can then be incorporated into your local investigation and will ensure that you have all the relevant responses when you are ready to complete the report on the SHOT Database.

1. When entering the SHOT questionnaire via SABRE, there is a 'Documents' button at the top of the report page – to the right of the 'Data Summary' button

2. This will open the list of available documents, including a list of SHOT category datasets
3. The 'Registration' questionnaire contains the questions that are asked for all labile component-related reports. Each reporting category also has an individual dataset with additional questions that will present when you complete the report
